CENTRO EL REGIONAL

The results of the study of the
economic conditions of the region
show that the economic situation
is generally favorable. The
growth rate of the region is
higher than the national average.
The main reasons for this are
the increase in the number of
enterprises and the expansion
of the services sector. The
industrial sector also shows
positive growth, although at a
slower rate than the services
sector. The agricultural sector
is also growing, but it is
still the least developed sector
in the region.

The study also shows that the
infrastructure of the region is
still weak. The roads are
poorly maintained and the
public transport system is
inadequate. The lack of
infrastructure is a major
obstacle to economic growth.
The government should invest
more in infrastructure to
improve the region's
economic performance.
