Table 5. Sources analysis
Source(s): Author's own, 2023

Author & Year	Subject of the study	Research method	Objective	Findings
Boyatzis et al., 2006	Leaders, Senior managers	Literature Review	To show that leader sustainability is adversely affected by the psychological and physiological effects of chronic power stress associated with the performance of the leadership role	When leaders experience compassion through coaching the development of others, they experience psychophysiological effects that restore the body's natural healing and growth processes, thus enhancing their sustainability
Abbas et al., 2019	University students	Cluster sampling method	To examine 18 constructive and adverse factors that impact on students' minds and how these helped students to share positive and negative sustainable aspects with others.	The usage of online social networks in Pakistan has a negative influence on a student's sustainable behaviour as compared to positive aspects
Delcea et al., 2020	Individual consumers	Descriptive and inferential statistics	To analyze demographic and socio-economic variables, such as age, gender, income, education, number of family members, etc., impact in consumers' pro-recycling behaviour	Demographic and socio-economic variables have a contribution to predicting residents' pro-e-waste recycling behaviour and must be considered in the development of sustainability educational actions
Munoz-Cespedes et al., 2021	Individual consumers	Natural language processing	To prove that financial literacy has a positive influence in a more sustainable consumption of financial products is directly related to	Greater attention must be given to financial literacy, from both private and public sectors, so that it can be used to drive more sustainable behaviour by individual consumers
Rezaei et al., 2022	University students	A pretest-posttest design and a random parallelization control group	To prove that online social networks significantly facilitated the cognitive progress in environmental education	Online social networks have a significant effect on motivating and improving environmentally responsible behaviour and can significantly aid in teaching and learning environmental issues in formal academic settings.
Muralidharan, et al., 2016	Millennials	Hierarchical regressions	To understand factors that motivate Millennials actual purchase of green products.	Peer communication predominantly influence green buying behaviour of millennials from India, while family communication is most important to Chinese millennials.
Dickinson, et al., 2013	OSNS users	Literature review	To review how evolutionary biology, social psychology, social networking, and citizen science disciplines support the design of online social networks to promote collective pro-environmental behaviour.	To support cooperative pro-environmental behaviour is important to provide opportunities for people to advertise their altruism, reward and punish others, and engage in game-like, between-group competitions.
Padilla-Melendez, et al., 2021	Entrepreneurs	Qualitative study (In-depth interviews)	To explain the behaviour of individual entrepreneurs when they exploit business ideas using the networks they have at hand in order to overcome	Entrepreneurs still encounter institutional barriers which exist in universities, in particular regarding building the social capital needed for exploiting their business ideas, and they are not, as expected, well

			institutional barriers in universities.	connected to the existing formal networks but rather to the informal ones.
Di Dio, et al., 2018	University students	Gamification	To analyze the effectiveness of a mobile app game in pursuing commuters to modify their mobility behaviours. The game rewards with tangible prizes the most environmentally sustainable mobility habits, connecting commuters with sponsors and companies operating in the urban context.	Gamification is an effective tool for involving citizens in environmental conscious mobility habits
Huétink et al., 2010	Consumers	An agent-based model	To analyze the effects of different strategies for hydrogen infrastructure development on hydrogen vehicle fleet in user practices and user behaviour largely remains unanswered.	Online social network can have a positive impact in the technological trajectory of hydrogen vehicles, a promising option towards a sustainable transport system, because they can influence in user practices and user behaviour
Zheng, et al., 2020	Households	Empirical research from online questionnaires	To understand the evolutionary process of household solid waste separation behaviour and to provide several suggestions for improving existing policies	Others' advice and perception of the behavioural outcomes has a significant influence on the intention to separate waste.
Knoot, et al., 2011	Private forest managers & landowners	Social network analysis (SNA)	To evaluate the influence of landowners' social networks on forestry management decisions	The larger the landowner social network is the better peer-to-peer learning and private forest management decisions are making
Krätzig et al., 2014	Citizens	Qualitative methods	To examine the potential of social media to support communication about sustainability on a local scale and the prerequisites for its use in the planning process	The use of online social networks to communicate the goals and objectives of sustainable landscape planning increase citizens engagement with local sustainability
Chen, et al., 2014	Travelers	Qualitative methods and simulation	To develop a model of a social network-based attitude diffusion system in the context of activity and travel choice behaviour	The principal mechanisms contributing to attitude formation using OSNS in the context of travel choice behaviour are identified, and mathematical models to capture these processes are developed.
Korkmaz et al., 2012	Architecture, engineering, and construction students	Qualitative and social network analysis	To help architecture, engineering, and construction students to learn how to exchange information and work in teams for effective design and construction of sustainable buildings.	Teamwork in OSNS with a high degree of interaction and leadership provide creative sustainable solutions and better articulation for effective design and construction of sustainable buildings
Shelton et al., 2017	Lay health advisor	In-depth telephone interviews	To advance the understanding of barriers and facilitators to the long-term implementation	Different factors (e.g., community partnerships, site leadership, funding), implementation processes

			and sustainability of Lay health advisor (LHA) programs in community settings to promote health and prevent disease.	(e.g., training), as well as characteristics of the intervention (e.g., perceived need) and lhas (e.g., motivations, burnout) are critical to the learning and sustainability of LHA programs.
Lokonon et al., 2018	Farm households	Inferential statistics	To examine the determinants of farmers' perceptions of climate change and subsequent adoption of sustainable land management practices	The adoption of sustainable land management practices could be encouraged promoting membership in farmers' organizations through ONS
Choi et al., 2021	Mobile short-video platforms users	Structural equation modelling	To analyze users' post-acceptance habit formation by incorporating perceived interactivity and perceived enjoyment into the expectation-confirmation theory of the information system continuance model	Satisfaction and perceived enjoyment are the foremost factor in determining users' habit formation
Hussain et al., 2021	OSN users	Inferential statistics	To investigate the connection between the social networking sites and green entrepreneurship intentions through a mediated-moderated model.	Exists a positive and significant link between social networking sites and green entrepreneurship intentions through the indirect effect of risk propensity and self-efficacy.
Saduak et al., 2019	High school students	Descriptive statistics	To compare the learning achievements and skills in sustainable agricultural practices between students who learned through OSNS and those who learned in the normal classroom.	The results revealed that the students who learned through OSN exhibited significantly higher learning achievements and skills in agricultural practices than those who learned in the normal classroom
Bozkurt et al., 2022	High school students	Text-mining, and social network analysis	To analyze the impact of the coronavirus (COVID-19) to higher education	The study concludes that the survival of higher education depends on the resilience, adaptability, the rise of online distance education, and sustainability skills of higher education institutions.
Cowan et al., 2017	University students	Social network analysis	To describe how the use of the Community of Practice framework engaged a campus-wide network of individuals in adoption of the Quality Matters training, rubric, and review process to advance distance education support and online course development.	Strong cohesion among the members of the network has a positive influence in distance education through OSNS
Boyle et al., 2021	Citizens	Social network analysis	To propose a methodological approach that acts as a tool for active change agents working in community to increase their capacity to engage a wider	A participatory approach in the initial stages of the sustainability educational program has a positive influence in the citizens engagement

			public in sustainable transition to a low-carbon society.	
Redman et al., 2021	University students	Survey & qualitative content analysis	To gain specific insights into: What motivates students to be Sustainability Change Agents, and How they can maintain their motivation in the face of setbacks	Social networks and intrapersonal skills helped to restore students' motivation overcoming setbacks
Du et al, 2022	Teachers	Social network analysis techniques	To explore teachers' network structure and characteristics, participants' behavioural patterns and how individuals in OSNS connect with each other.	Members of massive teacher informal online learning networks tended to communicate more with others of similar characteristics forming homogeneous communities
Achola et al., 2020	Consumer and citizen	Comparative and analytical approach	To analyze consumer education strategies put in place to create awareness and changes in consumer and citizen behaviour	Social network have become a civic mobilization channel for cleaning up garbage in public spaces;
Chou et al., 2021	Citizens	Thematic analysis	To identify practical factors in the development of community capital via farm-to-table and community care, and their implications for a resilient, healthy community.	Environmental education through OSNS promotes community health, well-being, and avoid environmental degradation

Table 6. People studied, research method, paper objective and paper findings of the studies used to identify positive and negative factors of 1
