<sup>a</sup> LOQ objective is the lowest level that was validated in spiked samples with satisfactory accuracy and precision; <sup>b</sup> data not available due to the poor calibration; <sup>c</sup> data not available due to the detector saturation; <sup>d</sup> data not available due to the presence of an interfering peak; <sup>e</sup> - means not detected; <sup>f</sup> underlined, values out of the acceptance interval; INS=insecticide; HERB=herbicide; FUNG=fungicide; ACAR=acaricide; OP=organophosphate; OC=organochloride.

\* In these cases (always at 0.01 mg/kg) the compound could be quantified, but *Q/q* ratio was out of tolerance due to the poor sensitivity for the confirmatory transitions.
